

TANYA AMBER

Data Analyst | Python · SQL · Azure · Snowflake · dbt

Kingston Upon Hull, UK | tanya.amber12@gmail.com | 07586 594861 | [GitHub](#) | [LinkedIn](#)

Dependent Visa — full, unrestricted right to work in the UK | No sponsorship required

PROFESSIONAL SUMMARY

Data professional with 4 years' progressive experience at Infosys delivering SQL-driven ETL pipelines, data warehouse solutions and business intelligence for global banking clients — ANZ Bank, ING Bank and Bank of Baroda — rising from trainee to Technology Analyst. Following a career break for international relocation and family care, has spent recent months sharpening a modern cloud data stack — building four end-to-end portfolio projects across Python, dbt Cloud, Prefect, Google BigQuery, Azure SQL, Snowflake and Azure Data Factory — and is now returning to the field recharged, targeting roles across Data Analysis, Analytics Engineering and Data Engineering. Full, unrestricted right to work in the UK — no sponsorship required.

TECHNICAL SKILLS

- **SQL & Databases:** T-SQL, PL/SQL, BigQuery SQL, Snowflake SQL — queries, stored procedures, views, indexes, window functions; relational database design and querying (SQL Server, Oracle, MySQL, PostgreSQL)
- **Programming:** Python (Pandas, NumPy, PyArrow, BeautifulSoup), Java (J2EE)
- **Data Engineering & ETL:** Informatica PowerCenter, dbt Cloud (staging/intermediate/mart, schema tests, macro override, dbt docs), Prefect, Azure Data Factory, REST API ingestion, ETL/ELT pipeline design and tuning
- **Cloud Platforms:** Google BigQuery · GCP IAM, Snowflake (Storage Integration, RBAC, access control, Tasks), Azure SQL Database · Azure Blob Storage · ADF
- **BI & Visualisation:** Power BI (DAX, DirectQuery, data modelling), Tableau, Oracle BI Reporting, Advanced Excel
- **Advanced Analytics:** Statistical analysis, regression modelling, customer segmentation, cohort analysis, CLV modelling, behavioural analytics (Google Advanced Data Analytics Certificate 2023)
- **Data Practices:** Scalable Architecture Design, Data Warehouse Design, Dimensional Modelling, Data Quality & Governance, Monitoring & Troubleshooting, Continuous Improvement, Pipeline Performance Tuning, Documentation & Technical Writing
- **Ways of Working:** Agile/Scrum, Jira, Git/GitHub (version control, dev/main branching, PR workflow), VS Code, Peer Code Review, Stakeholder Communication

PORTFOLIO PROJECTS

Four independently built end-to-end projects demonstrating progression from data analysis through to cloud data engineering:

Hospitality EPOS Data Pipeline | Python · Azure SQL · ADF · Snowflake · dbt Cloud · Power BI — [GitHub](#)

- Implemented an end-to-end scalable enterprise data platform following data engineering best practices: Python data generation → Azure SQL (T-SQL stored procedures, views, audit logging) → Azure Data Factory (daily scheduled pipeline with post-copy audit) → Snowflake → dbt Cloud → Power BI DirectQuery.
- Configured production-grade access control: Snowflake Storage Integration with Azure IAM role assignments and Snowflake RBAC (ownership transfer from ACCOUNTADMIN to SYSADMIN) for secure cross-cloud identity management — eliminating token-based authentication.
- Built a 3-tier dbt transformation layer: staging view (type validation, field standardisation) → ephemeral intermediate CTE (customer visit sequencing with ROW_NUMBER and LAG window functions, 30/90/180-day loyalty thresholds) → materialised mart tables; custom generate_schema_name macro override for schema routing; 5/5 automated schema tests passing; dbt documentation generated.
- Delivered Power BI DirectQuery dashboard with Revenue Share by Loyalty Segment, CLV Forecast, KPI cards and cross-filtering; version control via dev/main Git branching with conventional commit PR merge workflow; engineering journal documenting all technical decisions and troubleshooting steps.

UK Data Job Market Intelligence Platform | Python · Prefect · BigQuery · dbt · Power BI — [GitHub](#)

- Built a scalable, fully automated data platform ingesting 200+ live UK job listings daily via the Adzuna API; Prefect orchestration managing scheduling, monitoring, error handling and network delay management; loaded into Google BigQuery following data engineering best practices.
- Developed a 3-tier dbt transformation layer (staging → intermediate → marts) with SQL window function deduplication, validation tests and inline text-mining to classify demand for 7 core technical skills across 4 job segments; dbt documentation generated for all models.
- Delivered an interactive Power BI dashboard communicating salary distributions, geographic hiring hotspots, skill demand rankings and live job application links; version control via Git throughout development.

Retail Banking Customer Attrition Analysis | Python · SQL · Power BI — [GitHub](#)

- Generated a synthetic banking dataset of 5,000 customer profiles and 62,000+ transaction records using Python; applied SQL behavioural analysis to identify a clear correlation between customer complaints and attrition rates.
- Designed a multi-page Power BI executive dashboard tracking attrition KPIs, regional performance and balance trends for a non-technical stakeholder audience.

UK Financial Transactions Data Pipeline | Python · REST API · BigQuery · Power BI — [GitHub](#)

- Built a cloud-native ELT pipeline ingesting live transactional JSON from a public REST API into Google BigQuery using PyArrow for efficient in-memory data handling and GCP IAM service-account credential security; connected to Power BI for reporting.

PROFESSIONAL EXPERIENCE

Infosys Limited, India

May 2018 – Jun 2022

Promoted three times: Systems Engineer Trainee → Systems Engineer → Senior Systems Engineer → Technology Analyst

Technology Analyst (Data Analyst) — ANZ Bank

Apr 2021 – Jun 2022

- Scoped, implemented and optimised T-SQL queries, analytical views and stored procedures to validate, process and monitor high-throughput banking transaction workflows across relational database systems — applying engineering best practices with close attention to detail and data integrity.
- Designed scalable tabular and multidimensional data models from business requirements, documenting specifications and data flows; communicated progress and technical recommendations to stakeholders; reduced manual reporting effort by ~50% through automation; led sprint delivery in Jira within an Agile/Scrum team.

Senior Systems Engineer (Data Analyst) — ING Bank

Jun 2019 – Mar 2021

- Used T-SQL and Python to extract and transform large-scale relational database datasets; maintained data models and data dictionaries to ensure pipeline accuracy and continuous improvement of data quality; troubleshooted and resolved complex pipeline and database performance issues, improving Power BI runtime by over 10%.
- Collaborated with cross-functional teams to gather requirements and deliver data-driven recommendations; monitored pipeline execution and communicated findings clearly to both technical and non-technical stakeholders.

Systems Engineer (Data Engineer) — Bank of Baroda

Nov 2018 – May 2019

- Implemented scalable Informatica ETL workflows from scratch to ingest, clean, validate and transform legacy relational database data into a target warehouse during a major banking data migration — applying best practices in destination table design, source data handling and iterative pipeline tuning.

Systems Engineer Trainee — Technical Training, Mysore Campus

May 2018 – Oct 2018

- Completed Infosys training in Python, T-SQL, SQL Server, RDBMS, OOP, data structures and Java/J2EE; selected for specialist tracks in Power BI, Informatica and Oracle BI.

Career Break — International Relocation & Family Care

Jul 2022 – Present

- Relocated from India to the UK in 2022; took a planned career break following the birth of my child in June 2024.
- Returned to active technical development in recent months — building four cloud data engineering projects across Azure, Snowflake, dbt, Prefect and Power BI — evidenced by four publicly available GitHub portfolio projects.

EDUCATION & CERTIFICATIONS

- Google Advanced Data Analytics Professional Certificate — Coursera / Google (Sep 2023)
- Google Data Analytics Professional Certificate — Coursera / Google (May 2023)
- Microsoft Azure Data Fundamentals (DP-900) — In Progress
- Infosys Certified: Python Developer | ETL using Informatica | Oracle BI Reporting Basics
- PG Diploma in Mobile Computing — C-DAC, Pune, India (2017–2018)
- Master of Computer Applications (MCA) — Makhnarlal Chaturvedi National University, Bhopal, India (2014–2016)
- Bachelor of Computer Applications (BCA) — Patna Women's College, India (2011–2014)
